I want the software to handle upwards of 10000 ballots
Acceptance Criteria:
Election can handle upwards of 10000 balltos with no erros in a reasonable time.

I want a short report file to be created that has the date, type of election, the candidates, number of seats, winners and any other pertinent info. Accpetance Criteria: File created successfully. Report contains correct info.

I want to be able to have ballot inputs on the screen directly to the program. There should be a GUI to input ballots with a way to tell what kind of election, number of candidates, etc. Acceptance criteria: GUI is created where ballots can be inputted. GUI contains info about the election such as type, candidates, etc. Election runs normally after ballots inputed.

Not Started

Test to make sure the election run correctly

Document any necessary added code./ clean up code

In Progress

GUI can be closed by a specific command and election will run as expected

Test to make sure GUI pops up and ballots can be inputted

Completed

Update any necessary code to make sure it can handle lots ballots

Test various large input files to see how it handles many ballots

Make sure file has correct information about the election

Create a new file that outputs to the correct directory

Test the output of the file to various control files

Document the code/ clean up code

Should be able to run the election this way through a specific command

GUI pops up with a place to input ballots
